

## ***HOW WILL RAIN AFFECT TODAY'S APPLICATION?***

**OUR FERTILIZER:** At Pro-X, we only use premium quality, GRANULAR fertilizer. Any moisture the lawn receives after an application of fertilizer will increase the availability of the nutrients into the root zone of the turf. Here they quickly get to work at the job of the greening and thickening your turf.

**DON'T WORRY ABOUT RUNOFF OR LEACHING:** Recent research at Penn State University showed that once lawn care products are applied, there is very little movement from the application site. Treated lawns were subjected to as much as six (6) inches of rain per hour. Even under these extreme conditions, no appreciable loss of lawn care products due to either runoff or leaching could be detected.

**OUR BROADLEAF WEED CONTROL:** Weed controls are generally best applied as a liquid solution. Once the products dries it is not easily washed off, even during heavy rain (much like a fresh coat of paint). The drying time is the key. This may take as little as 15 minutes, but generally it is dry within a couple of hours. We ask that you keep an eye on any weeds for 10-14 days. If no wilting or discoloration is visible after that time, give us a call and we'll gladly be right out to retreat those stubborn weeds.

**REMEMBER:** Our goal and guarantee is your satisfaction. Please review the "products applied today" form and any notes with special comments or instructions. If you have any questions or concern about your lawn or application, please call: ***WE'RE ONLY A PHONE CALL AWAY!***
