Turf Tips

Important Information About Today's Application

Summer Application

Your lawn received our summer application. This treatment contains 30% sulfur coated urea to reduce burn potential to almost zero and produce an even feeding over the warmer days of summer. We also checked for turf damaging insects (chinchbugs, sod web worms, leafhoppers, etc.) If any were found we treated for them. Remember, turf insects can occur at anytime.

To keep your lawn looking great!!!

- 1) **Mowing**
 - a) Cut at 3 inches to stimulate root development
 - b) Never cut off more than 1/3 of the leave at a single cutting

- 2) **Watering**
 - a) One inch of water every 7-10 days translates to 6-8 inch soaking of the soil where grass roots are most active
 - b) Water in the early morning or later afternoon, the grass blades should be dry before nightfall

- 3) **Sharpen Blade**
 - a) Rotary mowers should be sharpened 4-5 times per mowing season to produce best results
 - b) When white tips appear on your grass blades, it's time to sharpen
